ECOES JV
ECONOMY & ECOLOGY

Franchising mobile charging stations

- ECOES MultiCharger

We do not compete with stationary charging stations. We replace them where they are absent.

Join the ECOES Franchise family to build your own high-revenue business with a single ECOES mobile charging station or a network of many stations.

- An investment that pays for itself in several months!

What we offer

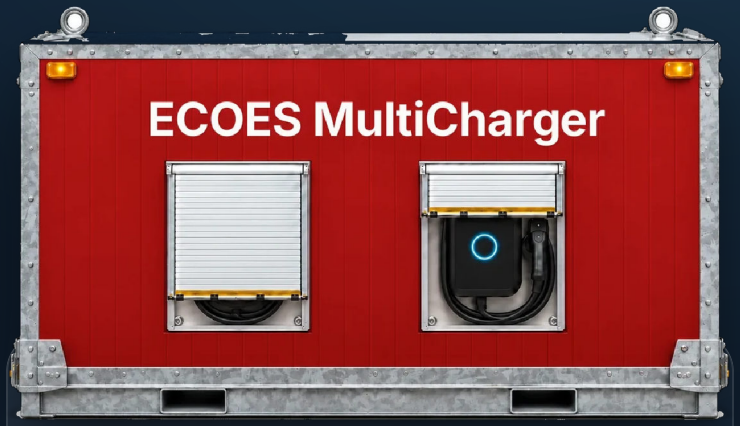

ECOES Franchise

A turnkey platform for your own mobile energy business: certified product, hardware, software, cloud billing and remote support.

ECOES MultiCharger

Mobile DC fast charging up to 120 kW for one, two or three vehicles – on a trailer or a truck, with vending, WC and card or QR payment.

ECOES MultiCharger Box

The budget version: two DC chargers with 60 kW in total, about 2× cheaper – plus 230/400 V backup power for hotels, motels and roadside businesses.

I. What is ECOES Franchise

ECOES Franchise is a complete **turnkey** platform for mobile charging infrastructure that combines proven industrial engineering, autonomous management and a centralised digital ecosystem. With industrial hardware, full certification and cloud management united in one charging process, a mobile energy business with a predictable and fully autonomous source of revenue can be started and scaled **from day one**.

Debit/credit card

QR code

POS terminal

All payments for charging and for customer services go through the payment system of ECOES Franchise, through which **the money goes straight into the franchisee's bank account.**

1. The franchise model is delivered through:

1.1 Unified technological design

The same model of charging station, protected as a registered design at the European Union Intellectual Property Office (EUIPO), the same engine, thermodynamic ventilation and a 3-port DC charging system with zero defects.

1.2 Legal and regulatory shield

Type approval, **IEC/CE safety marking** and certified DC energy meters (MID), valid worldwide.

1.3 Automated operational management

Cloud billing, POS payments, collection of local VAT and remote telemetry (FOTA), all running on their own, with no need for an accounts department at each charging station.

- Sales of the ECOES MultiCharger will begin in 2027, following the completion of the certification process.

Why ECOES Franchise

The investment pays back in about 5 months

At 50% operating load the gross profit of one ECOES MultiCharger is about 28,920 EUR a month.

Where there are no charging stations

On roads in remote and intercity areas there is not enough electricity for charging stations – and such places far outnumber those that have it.

A ready certified asset instead of years of development

By joining the ECOES Franchise family you get a ready certified product that starts making a profit for you from the first day you take it over.

Hardware, software and remote support

ECOES Franchise detects and fixes software faults remotely, to keep your charging units running without trouble.

Mobile, stationary or mixed mode

ECOES MultiCharger can work as a mobile charging station, and as a stationary one wherever power can be taken from the grid.

Operation in any climate, from –35 to +45 °C

It works equally well with any infrastructure – in the city, on the highway, in the desert, in the jungle and anywhere else.

About 20% additional revenue

A car charges for about 30 minutes on average. Meanwhile the driver and the waiting passengers are sure customers for the WC, water, coffee, packaged snacks and energy drinks.

Backup power and a stationary charging station

With the ECOES MultiCharger Box hotels, motels, petrol stations and other roadside businesses gain extra customers and revenue from charging cars.

LPG & PNG (methane) ECOES MultiCharger Box

In some countries of Central and Eastern Europe, Asia, Africa and Latin America the price of LPG is about 2 times lower than the price of diesel.

Mobile DC charging station

ECOES MultiCharger

DC fast charging up to 120 kW for cars, trucks, buses and tractors – where there are no charging stations. On a trailer or a truck, with a vending zone, a WC and payment by card or QR code.

120 kW
DC fast charging

1 – 3
vehicles at the same time

–35 … +45 °C
operation in any climate

230/400 V
AC power for buildings and sites

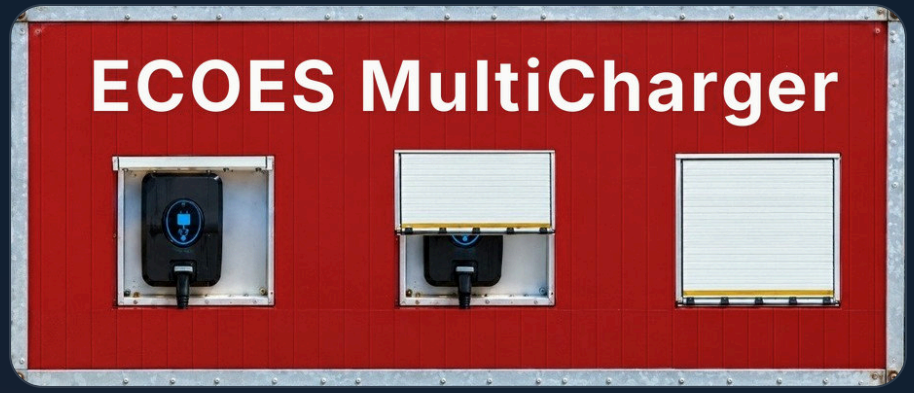

I. What is the ECOES MultiCharger

The ECOES installation is a MultiCharger, because:

1. It can charge all kinds of cars, trucks, buses, tractors and other mobile machines with electric motors with DC electricity.
2. It can perform **DC fast charging up to 120 kW** for one, two or three vehicles **(1 x 120 kW, 2 x 60 kW, 3 x 40 kW).**
3. It can charge electric vehicles and other sites in any climate, from −35 to +45 degrees Celsius.
4. It works equally well with any infrastructure – in the city, on the highway, in the desert, in the jungle and anywhere else.
5. It can be mounted on a truck to move on its own, or be towed on a trailer by a pickup or an SUV with a B+E licence.
6. It can work as a mobile or stationary DC charging station for vehicles, producing its own AC electricity or taking AC power from the grid.
7. It can produce electricity and supply 230/400 V AC to buildings, machines or other sites during power cuts or in remote places without a power supply.
8. The same machine can supply AC at 50 Hz and 60 Hz through a 60/50 Hz converter. The generator can be ordered to meet emission standard EU Stage II/III or EU Stage V.
9. It can run continuously or in standby, charging electric vehicles with DC or supplying AC power to buildings, machines or other sites.
10. It can take payments by card or QR code on its own and issue receipts and invoices to customers, with no operator or accountant involved.
11. It can offer customers everyday services: mobile vending machines for hot and cold drinks and snacks, a WC and a washbasin with hot and cold water.
12. On its own or in a network with other chargers, it can be monitored, diagnosed and configured remotely through the single cloud ecosystem of ECOES Franchise.

III. Construction and mobility

Power section

– includes a diesel generator **AC 400 V 50/60 Hz, 120 kW, 3 DC fast chargers 400 V – 800 V (1 x 120 kW, 2 x 60 kW, 3 x 40 kW),** DC energy meters (MID), cloud billing accepting POS payments by debit/credit card and QR code, an invoicing system, and hardware for remote monitoring, configuration and service of the charging station.

Customer service section

– includes vending machines for coffee, tea and other hot drinks, a vending machine for packaged food and cold drinks – water, soft drinks and energy drinks, folding tables, chairs and umbrellas, and a WC with a washbasin with hot and cold water. Cloud billing accepting POS payments by debit/credit card and QR code for the products consumed. A LiFePO4 battery system with an inverter powers the vending machines.

Operator's section

– includes a separate room with a bed, a desk with a chair, a locker for personal belongings, storage cabinets for vending products and a Wi-Fi connection. **The operator does not handle money.** All payments for charging and for customer services go through the payment system of ECOES Franchise, through which **the money goes straight into the franchisee's bank account.**

Mobility

The ECOES MultiCharger is a mobile installation that travels on a trailer with a gross weight of up to 3,500 kg. The main unit of the ECOES MultiCharger is the same whichever vehicle it is placed on.

ECOES MultiCharger on a trailer towed by a pickup

ECOES MultiCharger mounted on a truck

IV. Transport

The ECOES MultiCharger is delivered to the customer by road, rail or sea in a standard 20 ft or 40 ft container.

A 20 ft container carries one ECOES MultiCharger.

A 40 ft container carries two charging stations. When two charging stations travel together, the transport costs are shared between them, so transport is much cheaper than shipping each charging station in its own container.

V. Financial profitability of the ECOES MultiCharger

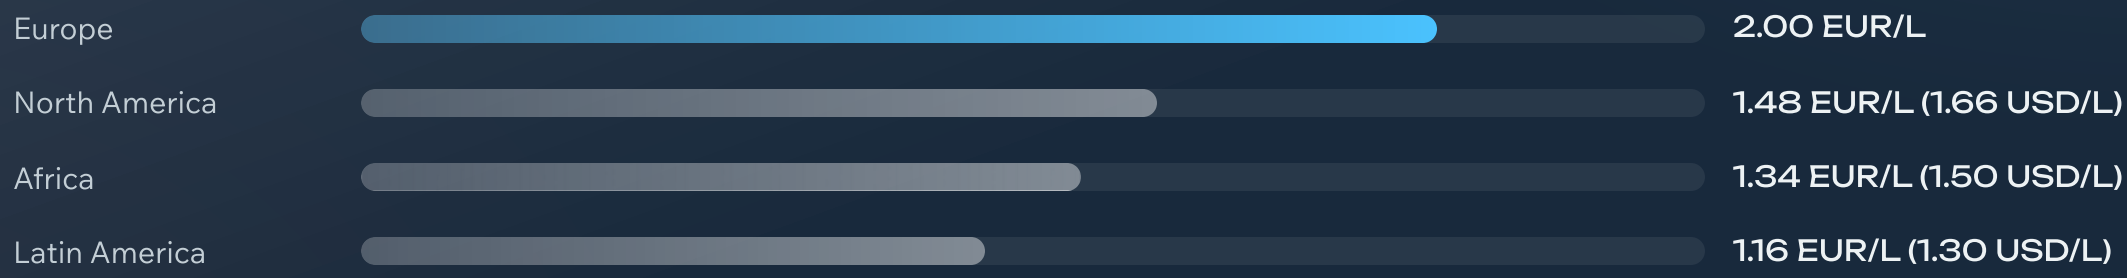

Main assumptions – average prices in Europe

0.60 EUR/kWh
price of 1 kWh DC from the generator (0.3 L × 2.0 EUR/L)

1.20 EUR/kWh
selling price in mobile mode

0.90 EUR/kWh
selling price in stationary mode (grid power 0.30 EUR/kWh)

0.60 EUR/kWh
gross profit per 1 kWh in both modes

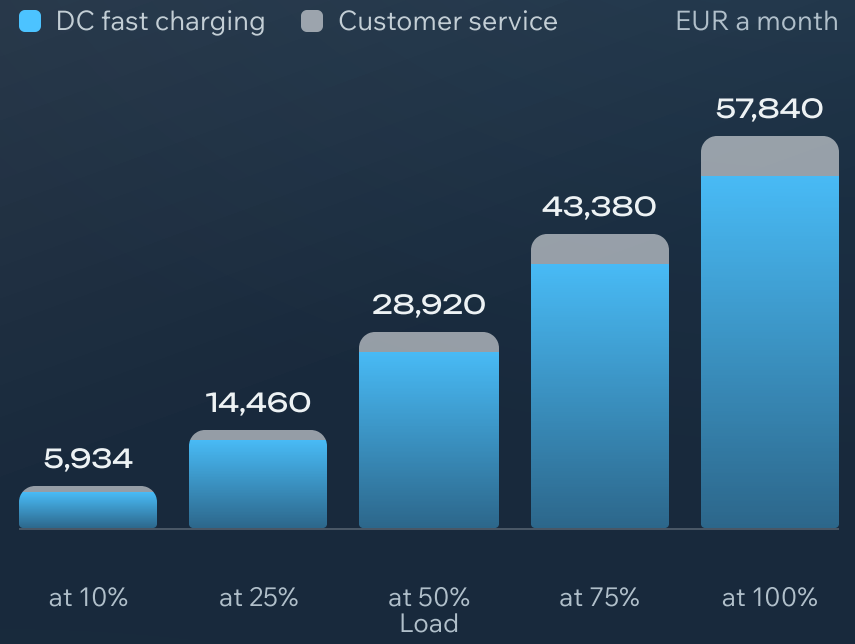

Average price of diesel incl. VAT in the fourth quarter of 2026 (the calculations are based on the price in Europe)

3. Determining the gross operating profit

Load	From DC fast charging of cars	From customer service (forecast value)	Total gross profit per day	Total gross profit per month	Annual gross profit (12 months)
at 10%	172.80	25.00	197.80	5,934.00	71,208.00
at 25%	432.00	50.00	482.00	14,460.00	173,520.00
• **at 50%**	864.00	100.00	964.00	28,920.00	347,040.00
at 75%	1,296.00	150.00	1,446.00	43,380.00	520,560.00
at 100%	1,728.00	200.00	1,928.00	57,840.00	694,080.00

The table shows that **just 10% load** of the ECOES MultiCharger generates enough profit to pay a lease or a loan for buying it, while still leaving a profit for the franchisee. At normal loads in the range of **50% – 75%, very substantial profits are generated**.

Gross profit per month at different load (from the figures in the table)

5. Investment profitability

To determine the investment profitability of the ECOES MultiCharger project, we compare the investment and the operating return with another kind of mobile equipment – **a new three-axle EURO 6 tractor unit with a new three-axle semi-trailer, compared with the ECOES MultiCharger. The price of one new tractor unit is comparable to the price of two ECOES MultiCharger charging stations.**

PRICE

At **100%** operating load the gross profit is about **3,000.00 EUR a month**

The investment pays back in **about 7 years.**

At **50%** operating load the gross profit is about **57,840.00 EUR a month**

(2 pcs × 28,920.00 EUR = 57,840.00 EUR)

The investment pays back in **about 5 months.**

Budget version of the ECOES MultiCharger

ECOES MultiCharger Box

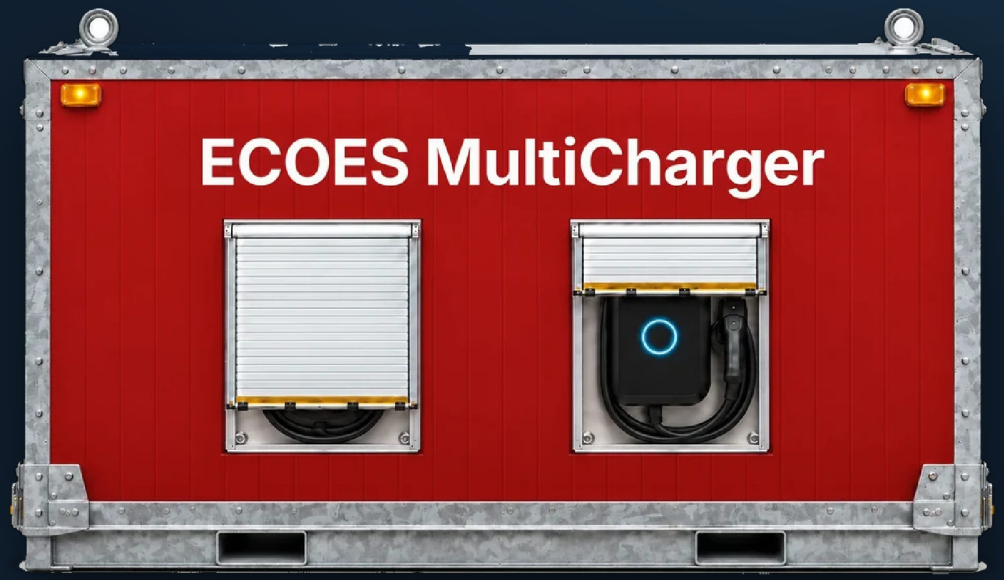

Two DC chargers with 60 kW in total, about 2 times cheaper than the ECOES MultiCharger, on a small truck, a pickup or a trailer – plus 230/400 V backup power for your site.

60 kW
DC fast charging

2
DC chargers (1 x 60 kW or 2 x 30 kW)

≈ 2 times
cheaper than the ECOES MultiCharger

230/400 V
backup power for sites, 60 kW

Gross profit

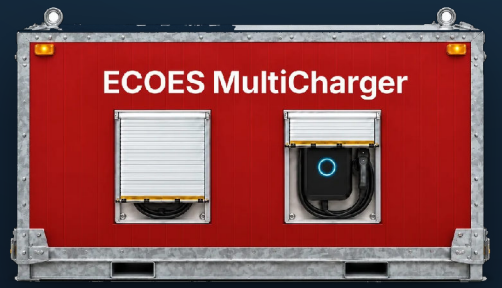

Load	Gross profit per day from DC fast charging	Gross profit per month from DC fast charging	Annual gross profit from DC fast charging
at 10%	86.40	2,592.00	31,104.00
at 25%	216.00	6,480.00	77,760.00
• at 50%	432.00	12,960.00	155,520.00
at 75%	648.00	19,440.00	233,280.00
at 100%	864.00	25,920.00	311,040.00

Investment profitability of the ECOES MultiCharger Box

PRICE

=

At **100%** operating load the gross profit is about **2,800.00 EUR a month**

The investment pays back in **about 5 years.**

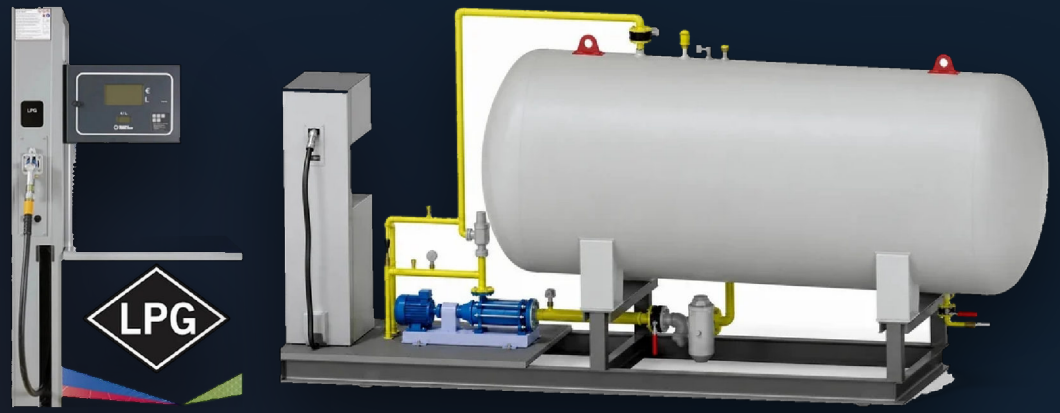

At **50%** operating load the gross profit is about **12,960.00 EUR a month**

The investment pays back in **about 5 months.**

LPG & PNG (methane) ECOES MultiCharger Box

LPG MultiCharger Box

In some countries of Central and Eastern Europe, Asia, Africa and Latin America **the price of LPG is about 2 times lower than the price of diesel**. Customers in these countries running the MultiCharger and the MultiCharger Box in **stationary mode** can **order the generators with LPG engines**. Running on LPG, which is about 2 times cheaper than diesel, will lead to **a significant reduction in the price of the DC electricity sold** for fast charging cars, while keeping the franchisee's gross profit.

Equipping hotels and roadside businesses with an LPG filling system gives the franchisee and the site the following additional advantages:

- Building a filling station for cars with DC fast charging and LPG at a fraction of the cost of building such a station from scratch.
- Much lower prices for the AC electricity produced, and DC charging sold to customers at lower prices.
- Additional profit from selling two kinds of fuel (DC electricity and LPG).
- A wider circle of customers who want DC charging and LPG. The drivers and passengers of these cars are sure customers of the site.
- Using the MultiCharger and the MultiCharger Box for backup or main power for the site, with cheap electricity produced from LPG.
- With an LPG tank of 5,000–10,000 litres, the hotel or roadside business can be supplied with cheap LPG for heating, kitchen stoves and boilers, which will cut the site's costs considerably.
- Filling an LPG tank of 5,000–10,000 litres makes it possible to buy LPG at wholesale prices, which lowers the delivered prices further.

Five main certification pillars

1 **Automotive standard**

Type approval for full compliance with EU and UN requirements for bodywork and rescue vehicles (ready European CoC for immediate registration).

2 **Machinery Directive**

Machinery Regulation (EU) 2023/1230. EN ISO 8528-13: the specific safety standard for generating sets driven by internal combustion engines.

3 **Energy standard**

Charging architecture under LVD 2014/35/EU: EN IEC 61851-1, EN IEC 61851-23 and EN IEC 61851-24 (protocols ISO 15118 and DIN 70121).

4 **Electromagnetic compatibility (EMC)**

EMC Directive 2014/30/EU: EN 61000-6-2 / EN 61000-6-4, immunity and emission of interference in industrial environments.

5 **Outdoor noise level**

Outdoor Noise Directive 2000/14/EC: the guaranteed sound power level.

- Sales of the ECOES MultiCharger will begin in 2027, following the completion of the certification process.

Announcements

1. Sales of the ECOES MultiCharger will begin in 2027, following the completion of the certification process. Given the high level of interest – and to ensure accurate quantity planning – we are accepting pre-orders via the following form:
2. Orders for delivery in 2027 will be exempt from the onboarding fee for the ECOES Franchise remote ecosystem.

Submitting a pre-order is for planning purposes only. It carries no obligation to purchase or make a payment.
